

PAYROLL RISK & EVIDENCE REVIEW

Payroll Integrity Pilot Review

Organisation	Test Org
Review period	15 Mar 2024 to 10 Apr 2024
Prepared as at	14 Apr 2026

CONFIDENTIAL

1. Executive Summary

A targeted payroll diagnostics review was conducted using available payroll data to identify triggered findings across key payroll integrity and evidence-related risk areas.

Total Findings Identified: 21

Severity Breakdown

- High: 12
- Medium: 9
- Low: 0

Interpretation

21 findings were identified, including 12 HIGH severity items. HIGH severity findings represent a significant proportion of total findings.

Findings distribution: 12 HIGH, 9 MEDIUM, 0 LOW (Total: 21).

The findings profile is strongly concentrated in logical items.

Assessment coverage is partial. Some risk areas may require additional data to fully evaluate.

Recommended Focus

Prioritise review of HIGH severity findings, followed by broader validation of related processes and data inputs.

HIGH severity findings represent conditions that may warrant immediate validation, while lower severity items may indicate control weaknesses that can be addressed over time.

2. Why This Matters

This pilot review is designed to surface triggered findings from the supplied payroll data so they can be validated and prioritised for follow-up.

- Triggered findings may indicate process weaknesses, data inconsistencies, or evidentiary gaps
- Higher-severity findings should be reviewed first to confirm root cause and operational impact
- Lower-severity findings can still highlight control weaknesses worth addressing over time

This pilot is intended to provide an initial evidence-based view of observed issues within the supplied data, not a full assurance conclusion.

3. Sample Findings

This pilot includes a limited selection of findings to demonstrate the types of issues identified.

Finding 1 — Termination processing

- **Rule:** TERM-010
- **Severity:** HIGH
- **Example employee:** E002

Issue Payroll activity was recorded after the employee termination date beyond the allowed tolerance window.

Suggested Action Review the termination date and subsequent payroll activity to confirm whether the employee was correctly finalised.

Finding 2 — Leave and entitlement integrity

- **Rule:** LEAVE-007
- **Severity:** HIGH
- **Example employee:** E002

Issue Leave transactions were recorded after the employee termination date.

Suggested Action Review termination processing and correct any invalid leave transactions.

Finding 3 — Record-keeping and evidence

- **Rule:** RKEG-PAY-010
- **Severity:** HIGH
- **Example employee:** E002

Issue Pay events were identified that fall outside the employee's recorded employment period.

Suggested Action Reconcile pay events against employment start and termination dates and investigate any payments recorded outside valid employment periods.

These examples represent a subset of the findings identified and are intended to illustrate the types of triggered conditions present rather than the full extent of issues across the review.

The presence of these examples suggests similar conditions may exist across a broader portion of the dataset and should be considered as part of a wider validation effort.

4. Scope & Methodology

This review was conducted using structured payroll data extracts and rule-based diagnostics.

- No system access was required
- Analysis focused on payroll transactions and derived outcomes
- Findings reflect triggered rule conditions observable within the supplied data
- All findings are derived directly from supplied payroll data and system outputs

5. Next Steps

A full review can provide:

- complete findings across all modules
- detailed employee-level impact analysis
- root cause identification
- practical remediation guidance
- audit-ready reporting outputs

This pilot provides an initial, data-driven view of triggered conditions and is not intended to represent a full payroll assurance review.
